

## **Armatile Case Study**

### **The Restoration of the Old Technical School Banbridge Co Down**

**September 2015**

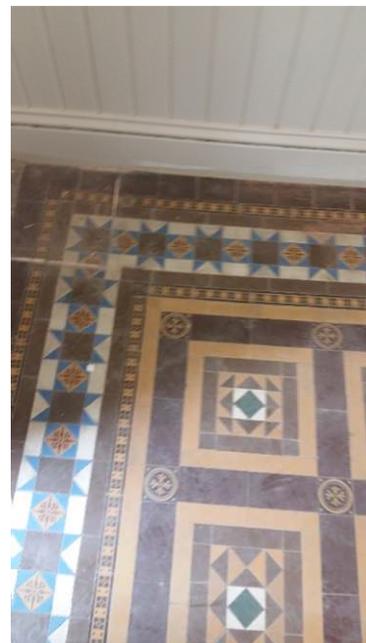

# Armatile excel in their latest Heritage Project

## The Restoration of the Entrance to The Old Technical School, Banbridge.

This week Armatile manufactured and fitted a beautiful new floor in a building conservation project in Banbridge, Co Down. The remit required that a new entrance floor must completely replicate the original tile pattern in the main walk ways.

1. The Technical School Banbridge 1927 & 2015

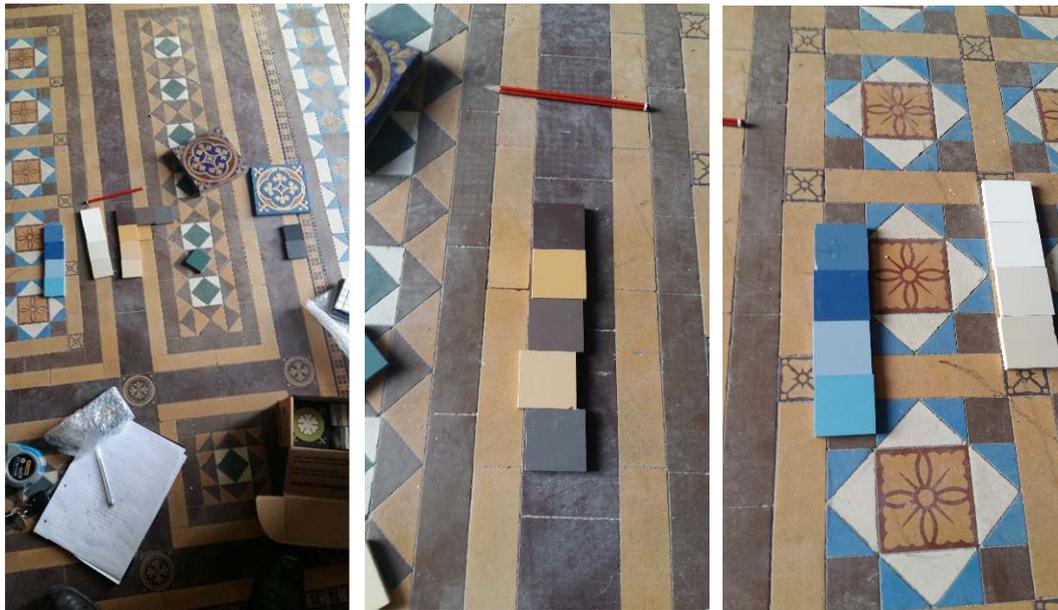

2. Uncovering the Original Flooring

Armatile's reputation for heritage, conservation and restoration projects led the client to contact Armatile's Contracts Manager Peter Rafferty.

The Architect Office of Armagh City, Banbridge and Craigavon Council was responsible for the renovation. They wanted a company able to deliver their vision and ensure their budget was met whilst maintaining the integrity of the building's heritage.

As varied as they are stunning, each project requires something unique. As the recognised specialists in this field we understand the sensitivities of the build environment and the materials used. We are expert in interpreting design needs and translating creative vision into reality.

3. Sampling and colour matching the original floor

Whether intricate, complex or minimal Armatile use waterjet technology to cut custom shapes and patterns to suit any aesthetic.

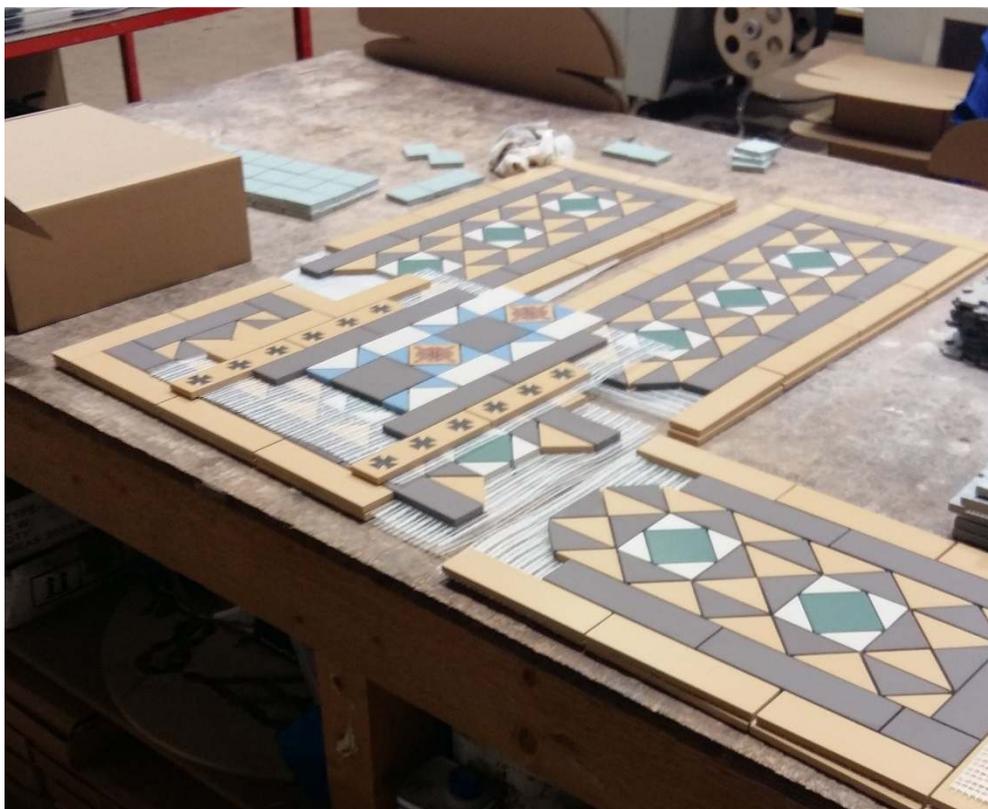

4. Armatile Surface Design and Manufacturing Factory in Armagh

Following discussions with the client Armatile manufactured and presented samples that met approval on colour, design and material.

5. Sample Manufactured for Approval by Client – Pieces mounted on mesh back panel

Our creative design team, with deep technical understanding of materials, was able to bring the Client's vision to life with nothing lost in translation.

6. Production of design on mesh mounted panels for ease & speed of installation on site

Ultimately, Armatile was able to exceed the needs of the Client by manufacturing a cost effective tile design in its factory in Armagh that blended fantastically well with the original beautiful flooring.

7. The new floor installed by Armatile
